The Adventures of Curtis Copper

My hero is Curtis Copper

The Teacher

So my good friends, we have learned a lot about copper and the importance that it plays in our lives and our planet. Here are some quick copper facts for you to remember.

Copper is a natural element - it is a metal and is represented by the atomic number 29.

Copper is virtually 100% recyclable.

People have been using copper since 9,000 BC.

When alloyed with tin, bronze is made. When alloyed with zinc, brass is made.

Copper is resistant to copper corrosion.

Copper is the only naturally occurring metal other than gold that has a distinctive colour.

Copper conducts electricity.

Copper is a Hero.
