BOMBER MAN

Bomber man

Bomber man has many uses today - 65% is used for copper wire and cables, 25% is used in buildings; 7% is used in industrial machinery and 3% is used to manufacture coins musical instruments, cookware and jewellery.

Bomber man is easy to work with, it is durable (meaning it will last a long time) and it won't rust or corrode. Brass and bronze are alloys of copper. An alloy is when two metals are combined together. Brass is a combination of copper and zinc. Bronze is a combination of copper and tin.

Curtis says "Look around you and see how many copper or brass items you can count in your homes and schools - I'm sure there are many. Better still, let's take a look together!"

"Let us visit your homes and schools and see how many copper items we can detect. So Jack, would you like to take us to your home?" "Look, the children walked up the path way to Jack's front door." "Look says Susan, 'Your door knob is made of brass which is an alloy of copper.' "Curtis correct says Curtis 'and you will also see that that the letter box is says Thomas, 'there are so many things many things made from copper or one of its alloys in your house Jack I wonder if my house is the same? Let's go and take a look, it's just next door
